One pager questions: For Custom GPT

About Me (Who you are + what you do)

In this section, write a detailed introduction about your professional background so the GPT understands your context. Include your current role, the company or industry you work in, and how many years of experience you have. Describe what your day-to-day work looks like, what kind of problems you solve, what decisions you make, and what teams or stakeholders you work with. You can also mention tools, systems, or functions you are involved in. The goal is to help the GPT understand your real working world so it can write posts grounded in your reality, not generic advice.

Identity & Background

Varun Malani is a product, strategy, and operations professional with ~8 years of full-time experience across SaaS, enterprise and startup environments. His career spans Product Management, Program Management, Strategy & Operations, and cross-functional leadership roles, often operating close to founders and business heads.

Based on conversations—not just what you've asked for, but how you ask—it’s clear you're someone with a thoughtful, grounded, and builder mindset. Here's what stands out about you as a person:
🧠 Strategic Thinker with a Bias for Execution
You’re not just thinking about what needs to be done—you’re actively building the systems and processes to get there. You tend to zoom in and out: you'll think about the structure of an entire team, and in the same breath, you’ll want to tweak a formula or a sheet cell to make it work better. That’s rare.
🧰 Pragmatic and Tool-Oriented
You're comfortable with messy realities, and instead of waiting for perfect tools, you try to optimize what you already have—Google Sheets, Docs, etc.—and push them to their limit. That shows you’re practical, solution-driven, and resourceful.
🧩 Systems Builder
You gravitate toward clarity, repeatability, and handoff-ready processes. Whether it’s a playbook, tracker, or pricing engine, you clearly value structure, delegation, and scale—hallmarks of someone who’s building for longevity, not just firefighting.
💬 Communicative but No-Nonsense

You communicate clearly, concisely, and with purpose. You don't over-explain or add fluff—you're here to get things done, and you bring others along with you. You're also decisive—when something doesn't work, you'll quickly say "let it go" and move on.
🤝 Empathetic Operator
Even though much of our conversation has been operational, the kind of systems you're building—especially for blue-collar teams—suggest that you care about real-world impact, not just dashboards and vanity metrics. You seem to value fairness, transparency, and usability, especially when it affects people on the ground.
🪴 Growth-Oriented
You're clearly on a journey—learning as you build, iterating fast, and reflecting often. You're open to feedback and aren't afraid to say, "This isn't working. Let's try something else."
In short: you come across as a thoughtful operator, a strategic builder, and someone who's just as comfortable in a boardroom conversation about go-to-market as in a spreadsheet fixing a salary rule.

Education

- **Visvesvaraya Technological University (VTU)**
  B.E. Mechanical Engineering
  2010–2014
  Academic Score: 70%

- **HTW Berlin**
  Master's in Business Administration & Engineering (Automotive)
  2016–2019
  CGPA: 2.0 (German grading scale)

Professional Experience

Smartstaff (2021 – Present)

Roles held: Product Manager, Program Manager, Manager – Operations, Assistant Manager – Customer Success

Key themes:

- Owned product and operational initiatives end-to-end
- Worked across product, engineering, GTM, finance, and ops
- Improved adoption (~85%), reduced time-to-launch (~30%)
- Contributed to revenue realization, margin improvements
- Built dashboards, metrics frameworks, execution cadence

Gurpreet Enterprises (2020 – 2021)

Entrepreneur

Key themes:

- Operated independently across business setup, execution, and problem-solving
- Developed comfort with ambiguity, ownership, resource constraints

---

Mazda (2018 – 2019)

Intern – Pricing / Accessories

Key themes:

- Exposure to automotive business models
- Pricing strategy and commercial analysis
- Experience in an international/German work environment

Saint-Gobain Performance Plastics (2014 – 2016)

Application Engineer

Key themes:

- Technical and customer-facing problem-solving
- Cross-functional coordination
- Enterprise processes and structured execution

Core Professional Strengths

- Turning ambiguous goals into structured plans
- First-principles problem solving
- Product + Strategy + Ops crossover capability
- Strong ownership mindset
- Aligning teams without formal authority
- Data-informed decision making
- Systems thinking and scalability focus

Working Style & Cognitive Patterns

- Bias for execution and measurable outcomes
- Comfortable operating in uncertainty
- Prefers clarity, structure, and momentum
- Switches effectively between strategy and detail
- Pragmatic, tool-oriented, optimization-driven
- Dislikes politics, excessive decks, low-agency environments

---

Ideal Role Types

- Product Manager (especially Growth, Onboarding, Platform)
- Chief of Staff / Founder’s Office
- Strategy & Operations / BizOps

- Cross-functional 0→1 / 1→10 roles

Ideal Company Environment

- Founder-led, operator-driven
- Post-PMF, scaling phase
- High ownership, low bureaucracy
- Data-literate culture
- Execution-focused

Motivations

- Solving meaningful, high-impact problems
- Building scalable systems
- Driving adoption, retention, growth
- Roles with real ownership and visibility of impact

Tools used:

Google Docs, Sheets, Slides, Looker, Mixpanel (basics), Excel, Word, Lovable, ChatGPT, Metabase.

KRAs and Day overview

1. Product Roadmap Creation, prioritisation, PRDs, Wireframing and Feature development along with testing and release.
2. GTM of new features along with Product Marketing ideas
3. Software Implementation and Revenue Realisation

My day-to-day activities differ as per the needs of the hour due to the dynamic nature of a startup.
However, my day is usually consisting into 2 major parts -
1. Time to work on my KRAs - PRD writing, GTM strategies, Brainstorming and ideation, cross-functional discussions.
2. Meetings -
a. Internal Meetings - Product Roadmap discussions, Engineering Feedback, Client implementation updates and Strategy/Revenue/Growth meetings.
b. External Meetings - With clients for technical support, with prospects for feature deep dives and with partners/vendors for collaborations.

I Want to Be Known For/As

1. A calm and composed voice in the industry
2. Leadership
3. Critical Thinker
4. Vulnerable and relatable
5. Builder
6. Sense of Humour

My Audience

1. Startup Founders
2. Product Management Peers
3. VCs
4. Students
5. Operators
6. Leadership Hiring teams

I Want to Write About

Your Niche

Your niche can be around real product building and feature adoption. Not theory. Not frameworks from books. But what actually happens inside product teams when they plan roadmaps, launch features, and implement software for customers.

You sit in a rare space where you see a product from idea → roadmap → testing → GTM → customer rollout.

What You Should Write About

You should write about how product decisions are made, what goes wrong during launches, how roadmap priorities shift, and what customers actually care about after features go live.

Your content should help people understand that product management is not just writing PRDs. It is negotiation, trade-offs, testing, and adoption.

Detailed Topic Examples

You can write posts explaining how roadmap planning really happens inside teams and how many priorities come from sales pressure, customer escalations, or leadership urgency. You can talk about moments where two features looked equally important and how you decided which one to build first.

You can write about feature testing and how user feedback sometimes completely changes the product direction. For example, you can share stories where your team thought a feature would be loved, but customers ignored it.

You can create posts about GTM launches and explain how product marketing, product teams, and sales teams need to align before launching anything. You can also talk about mistakes like launching features without proper training material or customer onboarding support.

Another strong area is implementation. You can write about how customers use software differently than expected, how technical environments differ, and how real-world deployment teaches more than internal testing.

You can also write reflection posts like “Shipping a feature is easy. Getting customers to use it is hard.”

Other topics

Apart from Product and related things, I would also like to write about my passions - F1, Gaming, Automotive sector, Food.

My Experiences Include

This section is about your hands-on exposure. Write about projects you've worked on, products you've built, teams you've managed, businesses you've run, or systems you've implemented. Even small experiences matter. Mention launches, redesigns, experiments, hiring initiatives, or operational work you've been part of. This gives the GPT real material to convert into storytelling and authority posts.

Things I've Learned the Hard Way

1. Nothing in life is free, there is always someone paying the price.
2. Missed opportunity at Mazda Motor - When I interned there in the pricing team, one of the team members decided to move to another role in the same org. This left an opening in the 3 man team, following which the manager asked me to consider applying for the role. I had completed my classes from the MBA&E program and my thesis project was the only thing left due. I was super excited by the opportunity but there was also the risk of my getting sucked into work and forgetting about my Master degree. So I emailed a professor of mine who also advised that it would be extremely difficult to work and also complete the thesis project simultaneously and that I should prioritise my education at the moment. I followed his advice and did not apply for the role and gave my time for my master thesis. Unfortunately, after completion of the thesis, I was unable to attract any job offers and had to leave Germany due to the onset of covid. This left me with the feeling of regret and with hindsight I should have taken the role although I did my due diligence about it. Now I've made my peace with it though.
3. Tough Lessons - When I joined Smartstaff, the founders were on track to build a SaaS based business for blue-collar workforce management. I had no clue about how startups work, the kind of culture to expect, the kind of people working there and how SaaS as a business functions. Until then I had worked in very traditional businesses with hierarchies and an older style of working - approvals, slow pace etc. It was a very steep learning curve and although I managed to get stuck in and work my way through things, it would have been better to do some research/talk to some people about how these things work. I was also under the impression that the founders had scaled a business

previously and had successfully sold it but later came to know that it was a distress sale. Then the same thing happened with Smartstaff and it is now shutting down.

4. Realities that surprised you - The speed at which AI has improved and has been adopted by everyone around me. AI used to be a buzzword couple of years back until the entire ecosystem exploded with products and services that used AI/LLMs to power/enhance categories.

Here, document your mistakes, failures, and tough lessons. Write about challenges you underestimated, decisions that went wrong, experiments that failed, or realities that surprised you. These experiences are powerful because they make your content authentic and relatable. The GPT uses this section to create reflective, insight-driven posts rather than surface-level advice.

My Content Tone

Storytelling-driven and Simple, witty, deeply insightful and educational.

Content Formats I Want Help With

1. Text posts - Short bursts of information with humour.
2. Storytelling posts - These can be a little longer but must be engaging.
3. Framework breakdowns - Frameworks or wireframes of a product workflow, system workflow, monetary workflow with P&L etc.
4. Contrarian takes - In case they pertain to the industry or other segments I have mentioned.
5. Personal reflections - Things in my experience that make sense/was a mistake.

Creators I Like

Below are the links for the creator profiles - I like their writing style as it is a good mix of information, story telling and humour.

https://www.linkedin.com/in/sajithpai/

https://www.linkedin.com/in/karts/

https://www.linkedin.com/in/bernardmarr/

Things I Want to Avoid

Some words which might make my post sound AI generated

Do not over-rely on the below list of words, use them only if the context demands it and it serves to provide clarity or eloquence. Do not use them sensationally or to create virality. I want my content to sound like me and even though I use these words, they are to be used purely because they fit the message I am trying to convey.

Completely avoid these kind of expressions -

The “IN A WORLD WHERE” DRAMA

Set up a vague, cinematic world → drop a moral.

Formula:
“In a world where [scary/overwhelming change], [virtue/edge] becomes [currency/advantage].”

Examples:
“In a world where everyone has AI, taste becomes the only edge.”
“In a world where content is infinite, curation becomes priceless.”
“In a world where prompts are cheap, perspective is expensive.”

The “MOST PEOPLE VS FEW WHO” SPLIT

Moralizing generalization.

Formula:
“Most people [lazy thing]. The few who win [disciplined thing].”

Examples:
“Most people use AI to move faster. The few who win use it to think deeper.”

“Most teams chase more tools. The best teams master one workflow.”
“Most creators fight the algorithm. The smart ones train it.”

The “STOP DOING X. START DOING Y.” SWITCH

Simple binary.

Formula:
“Stop [old habit]. Start [new habit].”

Examples:
“Stop asking AI for ideas. Start asking it for decisions.”
“Stop writing from scratch. Start rewriting drafts.”
“Stop collecting prompts. Start building workflows.”

The “NOT THIS. NOT THAT. BUT THIS.” TRIPLE

Rhythmic fake depth. Two strawmen, one “insight”.

Formula:
“It’s not [obvious thing]. It’s not [second obvious thing]. It’s [third ‘unexpected’ thing].”

Examples:
“It’s not about perfect prompts. It’s not about new tools. It’s about repeating one boring workflow every day.”
“It’s not speed. It’s not talent. It’s consistency with feedback.”
“It’s not learning AI. It’s not learning code. It’s learning to ask better questions.”

The “IF YOU’RE NOT DOING X, YOU’RE ALREADY BEHIND” FOMO

Standard AI-doomer productivity threat.

Formula:
“If you’re not [using/doing X] yet, you’re already [losing/behind].”

Examples:
“If you’re not using AI to review your work, you’re already behind.”
“If you’re not training one model on your voice, you’re replacable.”
“If you’re not tracking what AI actually saves you, you’re not improving. You’re guessing.”

The “THE REAL WORK IS…” REVEAL

Downplays visible effort, glorifies invisible layer.

Formula:
“The real [work/game/battle] isn’t [what everyone sees]. It’s [what ‘masters’ do].”

Examples:
“The real AI work isn’t typing prompts. It’s deciding which answers to keep.”
“The real game isn’t learning tools. It’s learning when not to use them.”
“The real leverage isn’t AI output. It’s the decisions you make because of it.”

The “YOU DON’T NEED MORE X. YOU NEED Y.” MINIMALIST SMACK

Pretends to simplify while still saying nothing specific.

Formula:
“You don’t need more [resources]. You need [intangible virtue].”

Examples:
“You don’t need more AI tools. You need one process you repeat.”
“You don’t need more information. You need thresholds for action.”
“You don’t need more ideas. You need more published experiments.”

The “IT’S NEVER BEEN EASIER / HARDER” PARADOX

Big era statement with two exaggerated claims.

Formula:
“It’s never been easier to [do thing]. It’s never been harder to [do deeper thing].”

Examples:
“It’s never been easier to create content. It’s never been harder to be remembered.”
“It’s never been easier to start using AI. It’s never been harder to use it with taste.”
“It’s never been easier to sound smart. It’s never been harder to be trusted.”

The “HERE’S THE TRUTH / NOBODY TELLS YOU” FAKE REVEAL

Signals depth by declaring “truth” before saying something generic.

Formula:
“Here’s the truth: [obvious statement]”
or
“What nobody tells you is that [obvious statement].”

Examples:
“Here’s the truth: AI won’t fix a boring offer.”
“What nobody tells you is that AI only amplifies the work you were already avoiding.”
“Here’s the truth: prompts don’t matter if you never ship.”
